The personal well-being estimates are from the Annual Population Survey (APS), which provides a representative sample of those living in private residential households in the UK. People living in communal establishments (such as care homes) or other non-household situations are not represented in this survey and this may be important in interpreting the findings in relation to those people reporting lower personal well-being. Data is weighted to ensure that estimates are representative of the target population.

In 2019/20 in Croydon, the sample of residents was from 350 people.

Comparisons between areas must be done so with caution as these estimates are provided from a sample survey. As such, confidence intervals are produced to present the sampling variability which should be taken into account when assessing differences between areas as true differences may not exist.

All average scores are considered precise apart from the following which are considered 'reasonably precise' (i.e. a co-efficient of variation >5% and <=10%)

- Croydon anxiety figures for 2012/13, 2014/15, 2015/16, 2018/19 and 2019/20

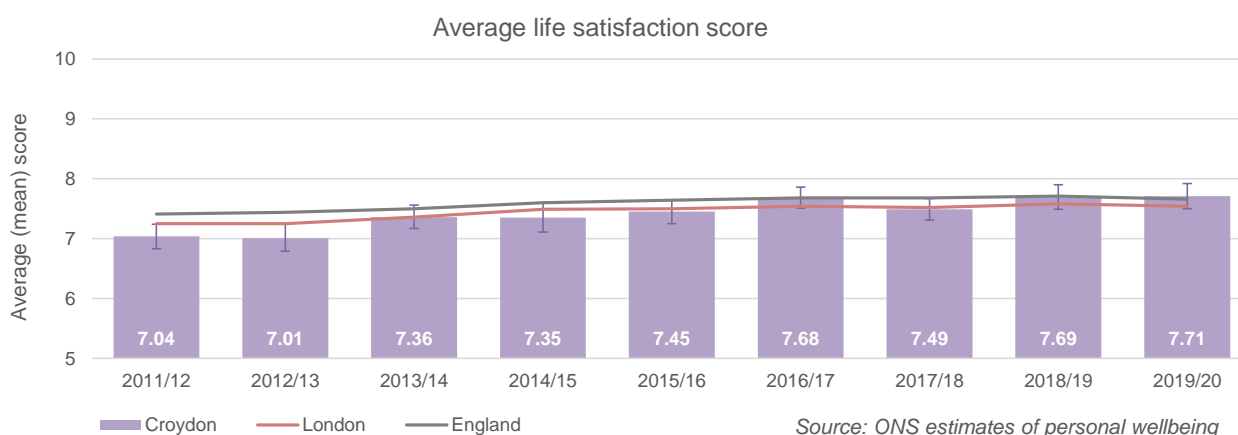

All Croydon % scores are considered 'reasonably precise' (i.e. a co-efficient of variation >5% and <=10%) apart from the following which are considered 'acceptable' (i.e. a co-efficient of variation >10% and <=20%)

- Life satisfaction %s for 2011-12 to 2014/15 and anxiety %s for 2012/13 to 2016/17, 2018/19 and 2019/20
